

## **Discussion Drawing**

These lists summarise the two different explanations for long necks in giraffes.

### **Lamarck**

1. a giraffe stretches its neck to reach food high up
2. the giraffe's neck gets longer during its lifetime because it's used a lot
3. that giraffe's offspring inherit its long neck

### **Darwin**

1. a giraffe with a longer neck can reach food high up
2. a giraffe is more likely to get enough food to survive to reproduce
3. a giraffe's offspring inherit its long neck

**Camel**

**Emperor Penguin**
